Colorado Secretary of State Office Initiates Pilot with World Wide Notary's E-Notarization Solution, DigaSign.

Vernon, TX—(12/08/2005) World Wide Notary (WWN), (Privately Held), the leading provider of electronic notary services, today announced a pilot program with the Secretary of State of Colorado. The pilot will involve the testing of the WWN's DigaSign, e-closing, e-notarization application. The pilot project will begin December 1, 2005 with an assessment phase slated for February, 2006. The State of Colorado has been technologically aggressive as one of the first states in the nation to develop and implement legislation and rules allowing for e-notarization.

"With the recent approval of the California Secretary of State to manufacture electronic seals and the newly initiated pilot program with the Colorado Secretary of State, World Wide Notary is positioned to make paper-less government and commercial transactions a reality," said Jason Streit, President of World Wide Notary.

"One of the unique requirements we implemented under the Colorado Notaries Public Act is that a notary must apply with the Secretary of State's office to become an electronic notary and receive approval to perform e-notarizations. The Secretary of State issues a set of unique identification numbers to the e-notary that must be attached to each notarial act in the document, which will track each e-notarization. This unique identification number along with verification information must be recorded in the notary's journal. With DigaSign's patent pending solution in the hands of a Colorado e-notary, we will be able to assess the application for compliance, security, and efficiencies for e-notarizations and the e-recording of mortgage titles and various state functions. DigaSign appears to have all the functionality to meet the Colorado requirements. We are very excited to test the new technology and discover what state functions it will accommodate that can enhance our services to the public," said Michael Shea, Colorado Secretary of State Director, Licensing & Enforcement Division.

"We look forward to working with Secretary of State of Colorado. With the functionality and compliance abilities of DigaSign, we will equip the e-notary's of Colorado with a valuable e-notarization tool that will streamline their current duties," said Bob Rice, CEO of World Wide Notary.

The DigaSign application is flexible and features a simple interface, which accepts documents needing verification and notarization from any Windows based application. Industries such as government, mortgage, real estate, title, legal, insurance, banking, auto, oil and gas as well as many others will save time and money with this service.

Pioneering electronic signatures, as early as 1996, World Wide Notary's management team has years of experience in the Internet technology industry working with stringent Federal mandates, such as HIPAA and E-SIGN as well as state statutes such as UETA, regarding security and the use of electronic and digital signatures.
